PROFESSIONAL SUMMARY

DevOps and Cloud Engineer with 4+ years of experience specializing in automation, scalable infrastructure, and secure cloud environments. Strong expertise in AWS services including EC2, VPC, S3, RDS, EKS, IAM, and CloudWatch. Proficient in building CI/CD pipelines using Jenkins, GitHub Actions, and Argo CD, with hands-on experience in Terraform, Ansible, Docker, Kubernetes, and monitoring tools like Prometheus and Grafana, along with Bash scripting for automation and system reliability.

TECHNICAL SKILLS

- **Cloud Platform:** AWS (EC2, VPC, IAM, S3, EBS, EFS, RDS, Route 53, Elastic Load Balancer ALB, Auto Scaling, EKS, ECR, CloudWatch, Secrets Manager, NAT Gateway, Internet Gateway, Security Groups, NACLs, Amazon Q Developer , Amazon Bedrock)
- **Operating Systems:** Linux (RHEL, Ubuntu), Windows
- **CI/CD Tools:** Jenkins, GitHub Actions, Maven
- **GitOps Tool:** Argo CD
- **Version Control:** Git, GitHub
- **Containerization:** Docker
- **Container Orchestration:** Kubernetes, Helm
- **Infrastructure as Code:** Terraform, AWS CloudFormation
- **Configuration Management:** Ansible
- **Artifact Repository:** Nexus
- **Monitoring & Logging:** Amazon CloudWatch, Prometheus, Grafana, ELK Stack
- **Scripting & Automation:** Bash/Shell, Python
- **Documentation & Ticketing:** Jira, Slack
- **Generative AI Tools:** Amazon Q Developer, Amazon Bedrock , Claude

PROFESSIONAL EXPERIENCE

Working as a **DevOps Engineer** at **Srotra Technologies Pvt. Ltd.** in Bangalore | From **Aug 2024 – present**

Project Title: Digital Banking Platform

Role: AWS & DevOps Engineer

Duration: Aug 2024 – present

Responsibilities:

- Managed AWS cloud infrastructure using **EC2, VPC, IAM, RDS, EFS, Route 53, ALB, Auto Scaling, Security Groups, and CloudWatch, Amazon Q Developer , Amazon Bedrock** and scalable application environments.
- Designed, developed, and maintained reusable **Terraform modules** to provision and manage AWS infrastructure following Infrastructure as Code (IaC) and organizational standards.
- Automated infrastructure provisioning and application deployments using **Terraform, GitHub Actions, Jenkins, and Argo CD**, enabling reliable and repeatable CI/CD pipelines across Development, QA, UAT, and Production environments.
- Deployed and managed containerized applications on **Amazon EKS (Kubernetes)** using **Deployments, Services, Ingress, ConfigMaps, Secrets, Helm Charts, Rolling Updates, and Horizontal Pod Autoscaler (HPA)** while performing cluster and application troubleshooting.
- Automated Linux server provisioning, application deployment, configuration management, and patching using **Ansible**, improving deployment consistency and operational efficiency.
- Monitored infrastructure and application health using **Amazon CloudWatch, Prometheus, Grafana, and ELK Stack**, configured alerts and dashboards, and proactively resolved performance, availability, and capacity-related issues.
- Investigated and resolved production incidents by analyzing **CloudWatch Logs, Kubernetes events, Linux system logs, application logs, and infrastructure metrics**, minimizing downtime and ensuring service reliability.
- Automated routine operational activities including **health checks, log cleanup, backup verification, monitoring, and maintenance** using **Bash/Shell scripting** and **Cron jobs**.
- Participated in **cloud migration** initiatives by provisioning AWS infrastructure using **Terraform**, migrating containerized applications to **Amazon EKS**, validating deployments, and supporting production cutovers with minimal downtime.

- Contributed to **Platform Engineering** by developing reusable Terraform modules, standardized CI/CD pipeline templates, deployment automation frameworks, and self-service infrastructure solutions to improve developer productivity and platform consistency.
- Leveraged **Amazon Q Developer** to generate **Terraform modules, Kubernetes manifests, GitHub Actions workflows, Jenkins pipeline snippets, IAM policies, Dockerfiles, Shell scripts, and AWS CLI commands**, accelerating DevOps development activities.
- Utilized **Amazon Q Developer** to troubleshoot **Terraform, Kubernetes, Jenkins, CloudWatch, Linux, and IAM-related issues** by analyzing deployment logs, infrastructure errors, and system events, validating AI-assisted recommendations before implementation through standard Git and CI/CD workflows.
- Integrated **Amazon Bedrock** into DevOps workflows to intelligently analyze CI/CD pipelines, Terraform infrastructure, Kubernetes workloads, and AWS operational logs, enabling faster root cause analysis, proactive issue detection, and AI-assisted remediation before impacting production environments.
- Utilized **Amazon Q Developer, Amazon Bedrock, and Claude** to enhance DevOps operations by analyzing infrastructure, CI/CD pipelines, Kubernetes workloads, and deployment logs, accelerating troubleshooting, root cause analysis, and AI-assisted remediation while ensuring security and governance compliance.

Worked as a **Support DevOps Engineer at Foundever in Hyderabad** | from **Aug 2023 – Aug 2024**

Project Title: Business-critical Application Support and Automation

Role: Support DevOps Engineer

Duration: Aug 2023 – Aug 2024

Responsibilities:

- Supported internal business applications used by **HR, Finance, and Operations teams** by ensuring system availability and operational stability.
- Monitored **disk utilization, CPU, memory**, and network performance to ensure optimal server health.
- Supported **log monitoring and analysis using application logs and Linux system logs** for issue resolution.

- Monitored **application health, server performance, and infrastructure alerts**, proactively addressing operational issues.
- Investigated application and server-related incidents through log analysis and troubleshooting to minimize downtime.
- Executed scheduled **maintenance activities, service restarts, backup verification**, and environment health checks.
- Automated routine operational tasks using **Shell scripting** to improve efficiency and reduce manual effort.
- Managed user access requests, permission updates, and environment support activities in accordance with organizational policies.

Worked as a **Junior DevOps Engineer** at **EXNER TECHNOLOGIES** in Hyderabad| From **march 2022 – Aug 2023**

Project Title: Digital Healthcare Platform

Role: Junior DevOps Engineer

Duration: Mar 2022 – Aug 2023

Responsibilities:

- Supported application deployments across **development, testing, and staging environments** using Jenkins, ensuring successful build and deployment execution.
- Managed and monitored AWS resources including **EC2, S3, IAM, VPC, CloudWatch, and Security Groups** to support application infrastructure and availability.
- Performed Linux server administration activities including **service monitoring, package installation, user management, system patching, and log analysis**.
- Assisted in provisioning, deploying, and maintaining AWS cloud infrastructure using **Terraform (Infrastructure as Code)**, executing infrastructure changes and validating deployments under senior engineer guidance.
- Automated routine operational tasks and health checks using **Shell scripting**, while troubleshooting application and server issues through log analysis and monitoring tools.

EDUCATION

MBA (Master of Business Administration)

Aurobindo Business Management Institute, Hyderabad - 2016 – 2018
