Personal Profile:

DevOps and AWS Cloud Engineer with 3 years of hands-on experience in streamlining **CI/CD** pipelines using **Jenkins**, automating cloud infrastructure with Terraform and Ansible, and deploying containerized applications using **Docker** and **Kubernetes**. Experienced in monitoring and observability using **Prometheus** and **Grafana**, with a focus on delivering scalable, resilient, and efficient cloud solutions.

Professional Summary:

- AWS Cloud and DevOps Engineer with 3 years of expertise in building scalable, high-availability systems by leveraging automation, **CI/CD optimization**, and proactive monitoring.
- Proficient in automating cloud infrastructure across public and private environments using **Terraform** and **Ansible**, enabling consistent and scalable provisioning.
- Configured **IAM roles** and policies, enforced least privilege access, and managed **VPCs**, **security groups**, and **load balancers** to ensure secure and efficient network architecture.
- Deep understanding of containerization using **Docker** and **Kubernetes**, including orchestration of large-scale clusters and implementation of **Blue-Green deployments**, reducing deployment incidents by 50%.
- Expert in CI/CD pipeline development using **Jenkins**, **ArgoCD**, **Maven**, **SonarQube**, and **Trivy**, reducing deployment time by 60% and streamlining releases.
- Experienced with **Ansible Playbooks** (YAML) for configuration management and deployment automation.
- Hands-on experience with **Git** for version control and **release management** across **Linux** and **Windows** platforms.
- Proficient in monitoring and alerting using **Prometheus**, **Grafana**, and **AWS CloudWatch**, ensuring system uptime and rapid incident resolution.
- Developed automation scripts in **Python**, **Bash**, and **PowerShell** for health monitoring, integrity checks, and operational efficiency.
- Skilled in code quality analysis using **SonarQube** and issue tracking with **Jira** and Service Now
- Provided 24/7 production support, maintaining high availability and minimizing system downtime through efficient **troubleshooting** and **monitoring**.

Technical Skills:

- **Cloud Platforms:** AWS (EC2, S3, RDS, S3, VPC, CloudWatch, EKS,Route53)
- **CI/CD Tools:** Jenkins, Git, Maven, Nexus,ArgoCD
- **Configuration Management & Automation:** Terraform, Ansible
- **Containerization & Orchestration:** Docker, Kubernetes
- **Monitoring & Logging:** Prometheus, Grafana,AWS CloudWatch
- **Version Control:** Git, GitHub
- **Scripting Languages:** Python Scripting, Bash
- **Operating Systems:** Linux (RHEL, Ubuntu, CentOS), Windows
- **Collaboration & Documentation:** Jira, Slack, ServiceNow
- **Code Quality & Security:** SonarQube & Trivy

Professional Experience:

- **DevOps Engineer at Greggs PLC, Newcastle, United Kingdom. (Sep-2023 to Nov -2025)**
- **Junior DevOps Engineer at SK Chilled, Middlesbrough, United Kingdom. (Mar 2023 to Sep 2023)**

Project Details:

#1. Greggs PLC (FMGC & Retail Digital Services) Sep-2023 to Nov -2025

Greggs PLC is a leading British bakery and food-on-the-go retailer with its headquarters in Newcastle upon Tyne, United Kingdom.

Roles and Responsibilities:

- Maintained highly available AWS infrastructure utilizing **EC2, S3, SQS, and SNS** to guarantee uptime for critical backend fulfillment applications.
- Automated environment provisioning using **CloudFormation** templates to eliminate environment drift between development and testing phases.
- Administered **Linux testing** servers and user permissions to ensure a secure, isolated sandbox for breaking and validating code.
- Orchestrated end-to-end automation pipelines using **Jenkins, Maven, and Nexus** to package, deploy, and verify build artifacts automatically.
- Leveraged **AWS CloudFront** to analyze content delivery speeds and identify backend performance bottlenecks during end-to-end user journey tests.
- Managed Jenkins automation jobs, optimizing plugin configurations to track **code coverage, test metrics, and deployment** success rates.

#2. SK chilled Mar 2023 to Sep 2023

SK Chilled Foods is a leading UK-based food manufacturer leverages advanced manufacturing facilities and digital supply chain systems to ensure strict compliance, cold-chain integrity, and rapid distribution.

Roles and Responsibilities:

- Designed and implemented scalable and secure **AWS cloud** solutions leveraging services such as **EC2, S3, RDS, EBS, ELB, Auto Scaling, and VPC** to host and support highly available supply chain logistics and logistics platforms.
- Developed and maintained **Git repositories** with robust access control, **branching**, and merging workflows to support efficient **source code management** across core internal systems.
- Automated CI/CD pipelines using Jenkins with **Groovy scripts, Web-hooks, and SCM polling**, managing **master/slave** architecture and job scheduling for streamlined application deployments.
- Automated infrastructure provisioning and application deployments using **Ansible, Python, and Shell scripting**, and managed containerized applications with **Docker, Kubernetes, Helm, and ArgoCD** for **GitOps-based delivery**.
- Implemented comprehensive monitoring and logging solutions using **Prometheus, Grafana, ELK Stack, and AWS CloudWatch** to ensure platform reliability, while managing secure artifact repositories with **JFrog Artifactory**.

Education:

M.Sc. | Teesside University, United Kingdom
