Personal Profile:

DevOps Engineer with **4+ years of hands-on experience** in building scalable cloud platforms, improving deployment automation, and enhancing operational reliability across AWS and Kubernetes environments.

Professional Summary:

- AWS Cloud and DevOps Engineer with over **4 years of expertise** in building scalable, high-availability systems by leveraging automation, **CI/CD** optimization, and proactive monitoring.
- Proficient in automating cloud infrastructure using **Terraform** and **Ansible**, enabling consistent and scalable provisioning.
- Configured **IAM roles and policies**, enforced least-privilege access, and managed **VPCs, Security Groups, and Load Balancers** to ensure secure and efficient network architecture.
- Deep understanding of containerization using **Docker** and **Kubernetes**, including **AWS EKS** cluster management, Kubernetes workload migration, orchestration of large-scale clusters, and implementation of **Blue-Green deployments**, reducing deployment incidents by **50%**.
- Expert in **CI/CD pipeline** development using **Jenkins, Argo CD, Maven, SonarQube, and Trivy**, reducing deployment time by **60%** and streamlining releases.
- Experienced with **Ansible Playbooks (YAML)** for configuration management and deployment automation.
- Hands-on experience with **Git** for version control and release management across **Linux** and **Windows** platforms.
- Proficient in monitoring and alerting using **Prometheus, Grafana, and AWS CloudWatch**, ensuring system uptime and rapid incident resolution.
- Developed automation scripts in **Python Scripting** and **Bash Scripting** for health monitoring, integrity checks, and operational efficiency.
- Skilled in code quality analysis using **SonarQube** and issue tracking with **Jira**.
- Provided **24/7 production support**, maintaining high availability and minimizing system downtime through efficient troubleshooting and monitoring.

Technical Skills:

- **Cloud Platforms:** AWS (EC2, VPC, IAM, S3, RDS, EKS, ECR, Route 53, CloudWatch, Auto Scaling, ELB, Lambda)
- **CI/CD & Build Tools:** Jenkins, GitHub Actions, Maven
- **Infrastructure as Code:** Terraform
- **Configuration Management:** Ansible
- **Containers & Orchestration:** Docker, Kubernetes, Helm, Docker Hub
- **Monitoring & Logging:** Prometheus, Grafana, AWS CloudWatch
- **Operating Systems & Collaboration:** Linux (RHEL), Jira, ServiceNow, Slack
- **Version Control & Repository:** Git, GitHub, Nexus, JFrog, Amazon ECR
- **Scripting Languages:** Bash (Shell Scripting), Python
- **DevSecOps & Security:** SonarQube, Trivy, AWS IAM, Kubernetes RBAC, Secrets Management, NACLs

Work Experience:

- Working as an **AWS DevOps Engineer** at **Srotra Technologies Pvt. Ltd.** (Jan 2023 – Jun 2026)
- Worked as a **Junior DevOps Engineer** at **Ontario Health** (Aug 2021 – Aug 2022)

Project Details:

Project #3

Client : CVS Health

Role : DevOps Engineer

Duration : Jan 2025 – Jun 2026

CVS Health

Leading American healthcare company headquartered in **Woonsocket, Rhode Island**, serving millions of customers through its pharmacy, health insurance, and healthcare services across the United States.

Roles & Responsibilities

- Provisioned and managed AWS infrastructure using Terraform for services including EC2, VPC, IAM, S3, RDS, EKS, Route 53, and CloudWatch.
- Designed and maintained CI/CD pipelines using Jenkins and GitHub Actions for multiple engineering teams, improving deployment consistency and reducing manual intervention.
- Developed reusable Terraform modules that standardized infrastructure provisioning across projects and environments.
- Worked with developers to troubleshoot build failures and deployment issues during releases.
- Containerized applications using Docker and deployed them to Amazon EKS using Kubernetes and Helm charts.
- Performed rolling updates and rollbacks to deploy application changes with minimal downtime.
- Integrated vulnerability scanning and security validation into CI/CD workflows.
- Created Ansible playbooks to automate Linux server configuration and routine administration tasks.
- Wrote Shell and Python scripts for backups, log cleanup, health checks, and server maintenance.
- Implemented monitoring and alerting solutions using Prometheus and Grafana, improving visibility into infrastructure and application health.
- Participated in production support and root cause analysis activities for critical customer facing applications.
- Worked with IAM roles and Kubernetes RBAC to ensure secure access to cloud resources.
- Worked on AWS optimization initiatives by identifying underutilized resources and improving cloud resource utilization.
- Participated in cloud cost optimization by reviewing unused resources, right-sizing EC2 instances, and implementing S3 lifecycle policies.

Environment:

- AWS (EKS, EC2, VPC, IAM, ALB, ECR), Kubernetes, Docker, Jenkins, GitHub, Terraform, Helm, SonarQube, Trivy, Linux, Cloudwatch.

Project #2

Client : Siemens

Role : DevOps Engineer

Duration : Jan 2023 – Dec 2024

Siemens

German multinational technology company providing automation, digital, and industrial solutions to customers worldwide.

Roles & Responsibilities

- Configured Git and Jenkins integration, utilizing Poll SCM trigger for efficient and automated job scheduling and version control.
- Integrated SonarQube static code analysis into Jenkins pipelines to identify security vulnerabilities and code quality issues.
- Configured secure access controls for AWS resources using IAM users, groups, and roles.
- Automated routine system administration tasks with scripts such as shell and python scripting on Linux servers, improving operational efficiency and reducing manual intervention.
- Managed Git repositories, ensuring secure project structures, and handling repository operations including creation, deletion, and merging of branches.
- Developed and optimized Jenkins based CI/CD pipelines for streamlined, automated build and deployment processes across various environments.
- Designed, implemented, and maintained Ansible roles and playbooks to automate configuration management tasks and standardize infrastructure.
- Provisioned and managed AWS services including EC2, S3, EBS, ELB, Route 53, and Auto Scaling Groups to optimize cloud resource utilization.
- Created and managed custom Amazon Machine Images (AMIs), EBS volumes, and snapshots.
- Configured Elastic Load Balancers (ELB) with tailored launch configurations to improve application scalability.

Environment:

- AWS (EC2), Jenkins, GitHub, Maven, Nexus, Linux, Ansible, Terraform, Shell Scripting.

Project #1

Project : Ontario Health

Role : Junior DevOps Engineer

Duration : Aug 2021 – Aug 2022

Roles & Responsibilities

- Managed AWS services including EC2, VPC, IAM, S3, RDS, EKS, ECR, Route 53, and CloudWatch.
- Provisioned AWS infrastructure using Terraform and maintained Infrastructure as Code configurations.
- Worked with VPC networking, public and private subnets, route tables, NAT Gateways, and Security Groups.
- Built and maintained Jenkins CI/CD pipelines integrated with GitHub and Maven.
- Containerized applications using Docker and deployed workloads on Amazon EKS using Kubernetes.
- Automated Linux configuration and operational tasks using Ansible, Bash, and Python.
- Implemented monitoring using CloudWatch, Prometheus, and Grafana, and security scanning using SonarQube and Trivy.
- Troubleshooting AWS, Linux, Jenkins, Docker, and Kubernetes issues and supported application deployments.

Environment:

- AWS, Docker, Jenkins, GitHub, Grafana, Nexus, Prometheus, Ansible, Terraform, Kubernetes.

Education

- M.Sc. in Montreal College of Information Technology (2019-2021), CANADA
- B.Tech in Electronics and Communication Engineering (2014-2018), Nalla Malla Reddy Engineering College
