

ABOUT

DevOps / Site Reliability Engineer with 3+ years of experience in automating cloud infrastructure, designing scalable CI/CD pipelines, and deploying resilient solutions across AWS and Azure. Skilled in Infrastructure as Code using Terraform and Ansible, containerisation with Docker, and orchestration via Kubernetes (EKS). Experienced in monitoring and observability using Prometheus, Grafana, and Cloud-Watch, with exposure to incident response, root cause analysis, and SLO/SLI tracking. Adept at reducing manual toil through automation and enhancing efficiency through DevOps best practices.

SKILLS

Operating Systems	Linux, Windows
Version Control	Git, GitHub
Provisioning Tools	Terraform
Configuration Management	Ansible
CI/CD Tools	Jenkins, Argo CD, GitHub Actions
Containerization	Docker
Orchestration	Kubernetes, Helm
Artifact Repository	Nexus
Build Tools	Maven
Static Code Analysis	SonarQube
Monitoring Tools	Prometheus, Grafana, AWS CloudWatch
SRE Practices	Incident Response, Root Cause Analysis (RCA), Postmortem Reviews, Toil Reduction
Cloud Platforms	AWS (IAM, EC2, VPC, S3, Route 53, EKS, RDS, CloudFront, SNS), Azure
Scripting Languages	Shell Scripting, YAML, Groovy
Programming Languages	C, Java, Python
Web/Application Server	Apache Tomcat
Ticketing Tool	JIRA

EXPERIENCE

Asics Technologies	Feb 2023 – Present
DevOps Engineer	
Project 2: Penske logistics	Sep 2024 – Present

A U.S.-based global logistics services provider specializing in supply chain management, dedicated contract carriage, distribution center operations, and freight brokerage. The company connects businesses worldwide with efficient, technology-driven transportation and logistics solutions.

- Designed and implemented end-to-end CI/CD pipelines by integrating Git, Maven, Nexus, SonarQube, and Jenkins to automate builds and deployments.
- Built and managed Docker images, deploying containerized applications on Kubernetes (EKS) for high availability and scalability.
- Implemented Git branching and release strategies to streamline code integration across environ-

ments.

- Managed Kubernetes resources deployments, services, and config maps to automate rollouts and streamline cluster operations.
- Designed modular, reusable Infrastructure as Code templates with Terraform for efficient AWS provisioning and management.
- Automated server configuration using Ansible with structured roles and playbooks for consistency and repeatability.
- Worked on monitoring service health using Prometheus and Grafana dashboards, including basic SLO/SLI tracking and alert configuration via AWS CloudWatch.
- Participated in incident response activities and contributed to root cause analysis and postmortem documentation to address recurring issues
- Hands-on expertise with AWS services including IAM, VPC, EC2, EKS, EBS, S3, ELB, Auto Scaling, Route 53, CloudFront, CloudWatch, and SNS to support cloud-native architectures.

Project 1: Senwes

Feb 2023 – August 2024

A South African agribusiness specializing in agricultural inputs, financial services, and market access. The company supports farmers and strengthens food security through integrated and sustainable solutions.

- Configured Git–Jenkins integration with Poll SCM triggers to enable automated job scheduling and version control.
- Automated routine administration tasks using Bash scripts on Linux servers, improving efficiency and reducing manual effort.
- Managed Git repositories with secure structures, handling branch operations including creation, deletion, and merging.
- Designed and optimized Jenkins CI/CD pipelines to streamline builds and deployments across multiple environments.
- Integrated SonarQube with Jenkins pipelines to enforce automated code quality checks via Maven scanners.
- Developed and maintained Ansible roles and playbooks to standardize configuration management and infrastructure automation.
- Provisioned and managed AWS services such as EC2, S3, EBS, ELB, Route 53, and Auto Scaling Groups to enhance cloud resource utilization.
- Created and managed custom AMIs, EBS volumes, and snapshots; configured Elastic Load Balancers with tailored launch settings to improve scalability and reliability.
- Assisted in monitoring system performance using AWS CloudWatch and participated in on-call incident response activities.

Master Thesis student

Design and Evaluation of GUI Test Reports

Developed a metric-driven reporting framework using the Scout testing tool to enhance clarity and usability of GUI test results. Conducted literature review, stakeholder-focused design, and validated the system through quasi-experiments and expert interviews, ensuring practical relevance and improved report quality.

EDUCATION

Jan 2022 - June 2024	Master's in Software Engineering Blekinge Institute of Technology, Sweden
Aug 2018 - Dec 2021	Bachelor's in Computer Science Jawaharlal Nehru Technological University, India
