Personal Profile:

An AWS and DevOps Engineer with 4+ years of experience in optimizing CI/CD pipelines using Jenkins, automating AWS infrastructure with Terraform and Ansible, containerizing applications with Docker and Kubernetes, and implementing monitoring solutions using Prometheus and Grafana. Focused on building highly reliable, scalable, and secure systems.

Professional Summary:

- 4+ years of experience in AWS Cloud and DevOps, delivering 99.99% uptime through automation and proactive monitoring.
- Designed and maintained highly available AWS infrastructure, optimizing costs through Auto Scaling and resource optimization.
- Built and managed CI/CD pipelines using Jenkins, Maven, and SonarQube, reducing deployment time.
- Automated infrastructure provisioning using Terraform and Ansible, improving efficiency and reducing manual effort.
- Improved container orchestration by 40% using Docker and Kubernetes for scalable microservices architecture.
- Implemented monitoring, logging, and alerting solutions, reducing MTTR (Mean Time to Resolution) by 35% using CloudWatch, Prometheus, and Grafana to ensure system health and optimize performance.
- Developed automated scripts in Bash and Python for tasks such as log rotation, backup management, and system monitoring.
- Strong problem-solving skills with a focus on automation, scalability, and system reliability.

Technical Skills:

- **Cloud Platforms:** AWS (EC2, S3, RDS, VPC, Lambda, EKS, CloudWatch, Route 53)
- **CI/CD Tools:** Jenkins, GitHub Actions
- **Infrastructure as Code:** Terraform
- **Configuration Management:** Ansible
- **Containers & Orchestration:** Docker, Kubernetes, Helm
- **Monitoring & Logging:** Prometheus, Grafana
- **Security & Code Quality:** SonarQube, Trivy
- **Scripting:** Bash (Shell Scripting), Python
- **Version Control:** Git, GitHub
- **Operating Systems:** Linux (RHEL)
- **Container Registry:** Amazon ECR, DockerHub

Work experience:

DevOps Engineer

SIGHTSEER INNOVATIONS PRIVATE LIMITED, Bengaluru

November 2021 – Present

Project Details:

Project #2

Client: Aviva Finance

Duration: February 2023 – Present

Role: DevOps Engineer

Aviva Finance

British multinational insurance company headquartered in London, serving 25.2 million customers across the UK, Ireland, and Canada.

- Designed and implemented AWS infrastructure such as EC2, VPC, RDS, S3, EKS, CloudWatch, ensuring high availability (99.99% uptime).
- Implemented CI/CD pipelines using Jenkins, Git, and Maven, reducing deployment time by 60%.
- Automated infrastructure provisioning using Terraform and Ansible, eliminating manual configuration.
- Optimized Docker images using multi-stage Dockerfiles, reducing image size by 60% and improving container start-up time.
- Deployed and orchestrated containerized applications using Docker and Kubernetes, enabling faster microservice rollouts and minimizing incident recovery time.
- Developed Shell scripts for automation tasks such as monitoring Linux server disk usage, backups, and clean-up routines.
- Set up monitoring dashboards using Prometheus and Grafana; reduced MTTR (mean time to repair) by 35%.
- Implemented cost optimization strategies (e.g., right-sizing, S3 lifecycle policies), improving cloud resource efficiency.
- Collaborated with cross-functional teams to troubleshoot and resolve CI/CD and cloud infrastructure issues.

Project #1

Client: Rush Gold

Duration: December 2021 – January 2023

Role: DevOps Engineer

Rush Gold

Rush Gold Global is a fintech platform and app that enables users to buy, sell, and send investment-grade physical gold and silver, with holdings stored in secure Sydney, Australia vaults insured by Lloyd's of London.

- Configured Git and Jenkins integration, utilizing Poll SCM trigger for efficient and automated job scheduling and version control.
- Automated routine system administration tasks using Shell and Python scripts on Linux servers, improving operational efficiency and reducing manual intervention.
- Managed Git repositories, ensuring secure project structures, and handling repository

operations including creation, deletion, and merging of branches.

- Developed and optimized Jenkins-based CI/CD pipelines for streamlined, automated build and deployment processes across various environments.
- Integrated SonarQube into Jenkins pipelines, automating code quality analysis and ensuring continuous improvement via Maven scanners.
- Designed, implemented, and maintained Ansible roles and playbooks to automate configuration management tasks and standardize infrastructure.
- Provisioned and managed AWS services including EC2, S3, EBS, ELB, Route 53, and Auto Scaling Groups to optimize cloud resource utilization.
- Created and managed custom Amazon Machine Images (AMIs), EBS volumes, and snapshots.
- Configured Elastic Load Balancers (ELB) with tailored launch configurations to improve application scalability.

Education:

Bachelor of Engineering (B.E) - 2018

Bangalore Institute of Technology, Bangalore
